

DECADE OF DURABILITY

DECADE OF DURABILITY

ConMed Linvatec has designed and manufactured Autoclavable camera heads for over 10 years. Our newest generation camera system offers True HD 1080p native scan resolution at the camera head and all the durability and cost savings of Autoclavability.

Not only will Autoclavability save you up to \$18 per procedure on sterilization chemicals, but ConMed Linvatec's proprietary ShockFlex™ Prism gives you piece of mind in ensuring our 3-chip camera heads withstand the rigors of the OR for years to come. For a busy hospital performing 5,000 procedures annually this equates to nearly \$100,000 per year.

Your local ConMed Linvatec representative will show you how much you can save compared to your current chemical sterilization processing. It could be hundreds of thousands of dollars for a busy surgery center, or over \$1,000,000 for a large city hospital.

Guarantee of Durability

We have such confidence in the durability of our cameras and the advantages of autoclavability that we will offer you a Five Year Product Guarantee against autoclave damage caused to the capsule inside your True HD™ camera head.
